

# LEARNFLEX™ TECHNICAL SPECIFICATIONS

**LearnFlex™**  
 ▷ is the perfect fit for Learning Management

## OVERVIEW

The LearnFlex™ Learning Management System allows your organization to register, track, manage, and financially administer training and educational activities for employees, members, managers, students, customers, and the general public.

The LearnFlex™ application is extremely scalable and has been successfully deployed for small organizations with fewer than 500 users as well as large organizations with over 500,000 users. LearnFlex™ is completely web-based and does not require end users to install any additional proprietary software.

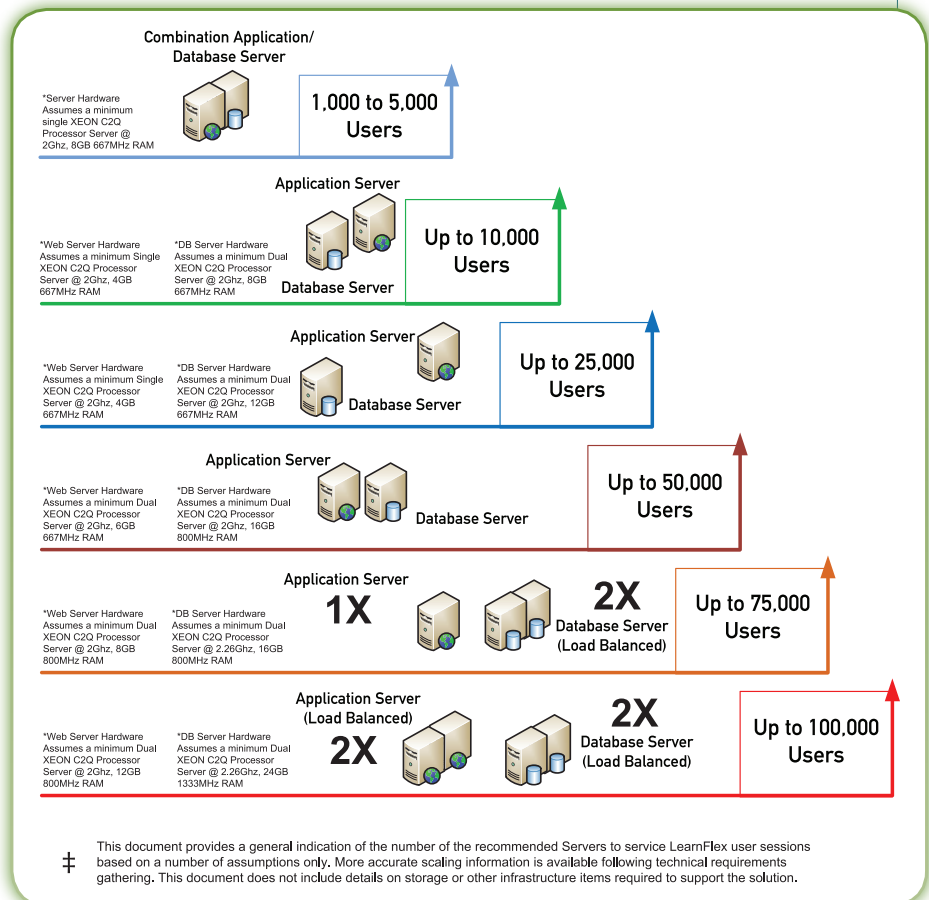

## TECHNOLOGY REQUIREMENTS

Users only require a computer capable of surfing the internet with a minimum installed version of Internet Explorer 6+, Firefox 2.0+, Chrome or Safari 4+.

## INSTALLATION OPTIONS

**Hosted Option:** LearnFlex™ can be hosted by Operitel in its secure, high-speed Data Centre. Database and web servers, administration of servers, database backup (full daily content backups and transactional backups every 15 minutes), and security (if requested) via a SSL certificate.

**Client Hosted:** You can be responsible for server hardware, administration of servers, and installation of LEARNFLEX behind your own firewall.

\*Note that this sizing diagram does not take redundancy into consideration and is subject to change based on specific environmental requirements.

### SOLUTION OVERVIEW

#### *User Interface / Application Skin*

The User Interface/Application Skin layer constitutes the look and feel of the application. Each installation of LearnFlex™ is completely re-branded to reflect the look and feel of your organization. It is at this point that the multi-lingual capabilities of the application are implemented. All language elements of the interface are designed to be 'swapped-in' on the fly, allowing for quick changes of displayed user language. The User Interface portion of the application also determines the path that the user will take through the application, and how various areas of the application interact with one another.

#### *Management Bridge*

The Management Bridge acts as the controller for the application. It drives the system configuration in order to meet functional specifications and controls the communication between individual components of the system.

#### *Process Components*

The Process Components are the individual building blocks required to deliver the necessary functional requirements of the system (e.g., Learning Plan, Achievement Record).

#### *Communication Components*

The Communication Components facilitate communications with external applications and systems (e.g., Active Directory, LDAP, Employee Information Systems, Financial Information Systems, Human Resource Information System, and Customer Relationship Management Systems).
